

Pulsarlube BT App [General Guidance]

Getting Started

Pulsarlube BT App & Server admin access is available after signing up in the App. The admin must create secondary user accounts at <https://bt.pulsarlube.com> in order for accounts to have shared access to the same lubricators.

**Lubricator access cannot be shared between multiple admin accounts created via the App.*

- To sign up, open the App and tap **Sign up**.
- To log in, enter email address and password. Then select either **General [Manage BT]** or **Registration [Register BT]** to start. Lubricators will need to be registered in **Registration** before being able to manage them in **General**.
 - **General [Manage BT]** – to control, check, or modify settings of registered lubricators
 - Only accounts with General access can control, check, and modify settings of registered lubricators.
 - You are unable to register or unregister lubricators in General.
 - **Registration [Register BT]** – to pair unregistered lubricators to the account
 - Only accounts with Registration access can pair and unpair lubricators.
 - You are unable to control, check, or modify any lubricator settings in Registration.

Admin accounts will automatically have access to both **General** and **Registration**. When creating secondary accounts, admins can limit secondary account access to either **General** or **Registration**, or grant access to both.

Pulsarlube BT App [General Guidance]

Settings

Back up lubricator data as either a csv or text file

Inquire and check answer

When there has been no update since last synchronization within a preset number of days (ex. 5 days), a push notification pops up.

Lock (Password required to access, in order to prevent accidental changing of settings or tampering)

Hide or view the lubricators in the group

Pulsarlube BT App [General Access_Naming Lubricators]

Set Lubricator Name

- Select lubricator ID and tap **Rename**

Change Lubricator Name

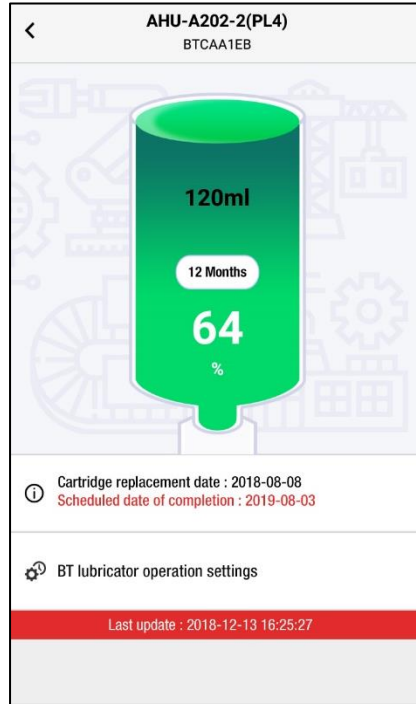

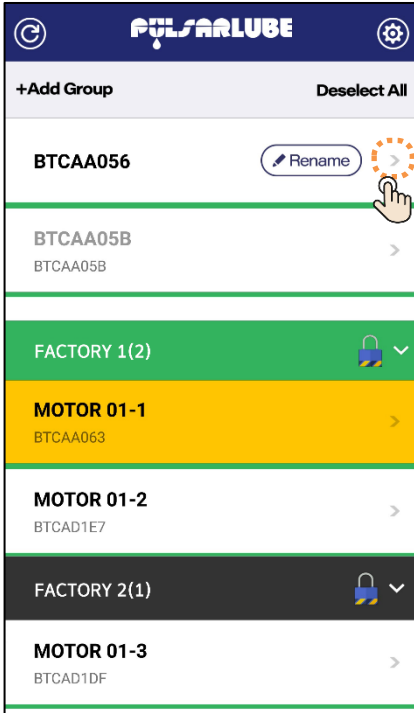

- Hold lubricator name for 3 seconds and tap **Change name**

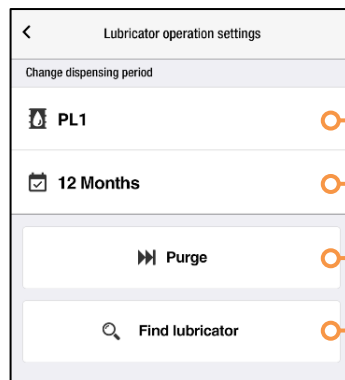

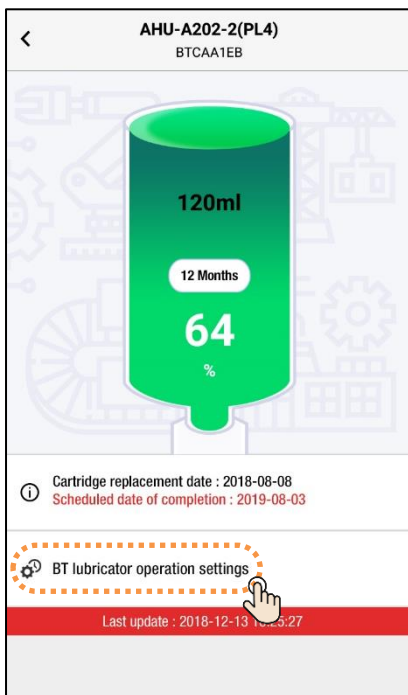

Pulsarlube BT App [General Access_Managing Lubricators]

Check Lubricator Status

- Tap the arrow icon to see lubricator status and details

- Tap BT lubricator operation settings to manage settings

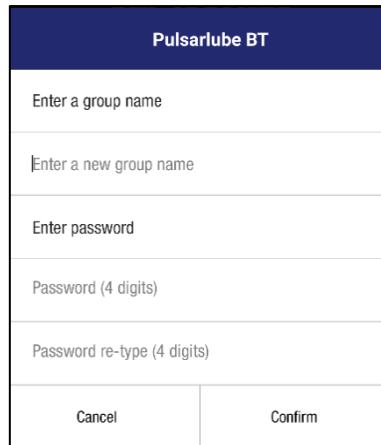

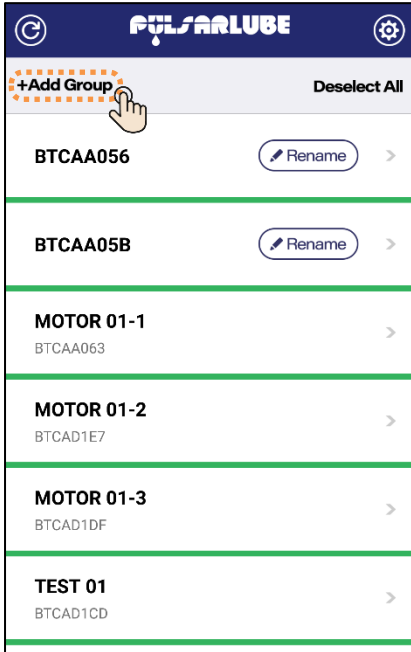

- Select Grease Type (PL1 ~ PL20 and/or enter custom grease)
- Select Dispensing Period (1 ~ 12 months)
- Purge Grease (6 pump cycles will dispense. To cancel, press PURGE button on lubricator.)
- Find Lubricator (LCD backlight blinks when found)

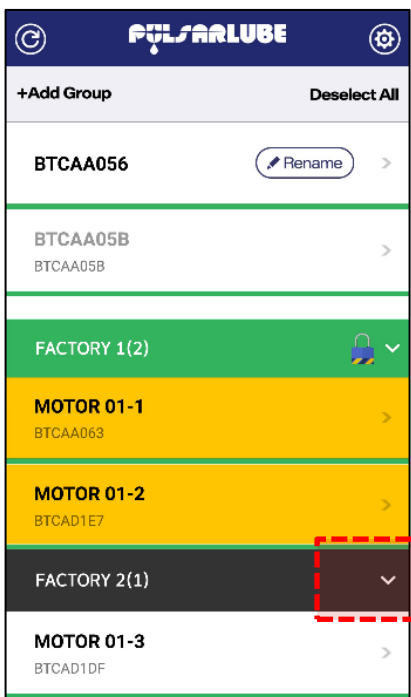

Pulsarlube BT App [General Access_Grouping Lubricators]

Create Groups

- Tap **+Add Group**. Create a password to prevent unauthorized access.

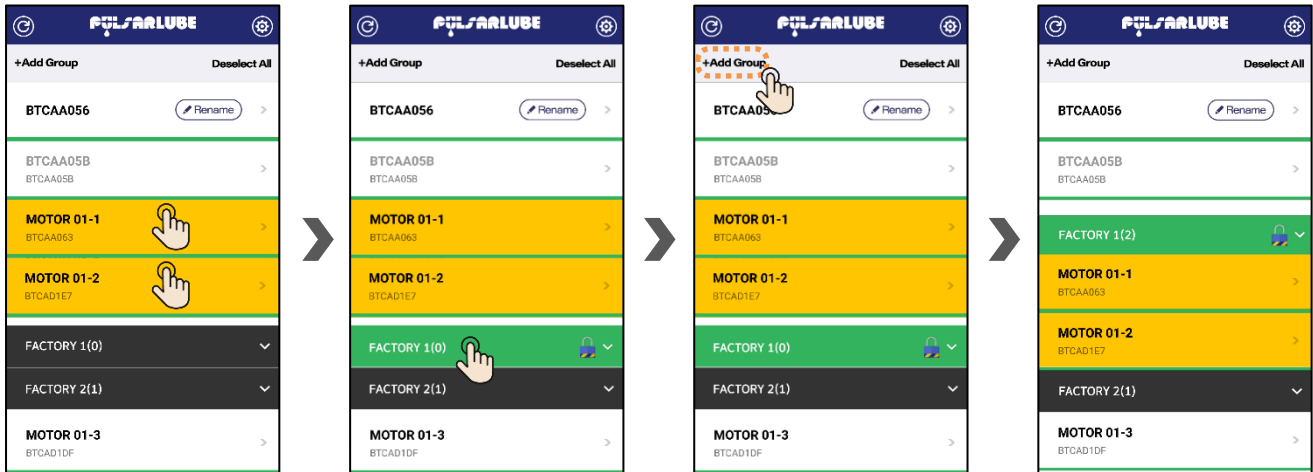

- If the password is not entered for creation of a group, the group lock is unavailable so the lock icon does not appear. The lubricator status and details are also shared among customer employees.

Pulsarlube BT App [General Access_Grouping Lubricators]

Add Lubricators to Existing Groups

- Select lubricators, select group, then tap **+Add Group**.

Edit Group Settings

- Press and hold group name for 3 seconds. Group settings can be modified only by authorized users after entering password. Admin accounts can change and control group functions without a password.
